-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The indicated allowability of claims 1-3 are withdrawn in view of the newly discovered reference(s) to Hashemi et al (5,344,795). Rejections based on the newly cited reference(s) follow.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Hashemi et al (5,344,795).

Hashemi teaches an IC package with an implanted heat sink dissipation fin 14 in Fig.1 composed of encapsulant 12 having a PCB side and an opposing open side, a chip 16 or 18 inside the encapsulant 12 and where the fin 14 having an upper portion 30 and a lower portion 28(32)(first ends of fins 26 connected to the base). The lower portion 28(32) does have a predetermined amount of the encapsulant 12 located on the top thereof as shown in Fig.1 and the upper portion 30 does extend outwardly above the opposing open side of the encapsulant as seen in Fig. 1. The leads 24 allow the package to mounted on a PCB. Regarding claim 2, Col. 4, lines 43-44 teach that the fin 14 can be directly applying to the backside of a chip 16 or 18.

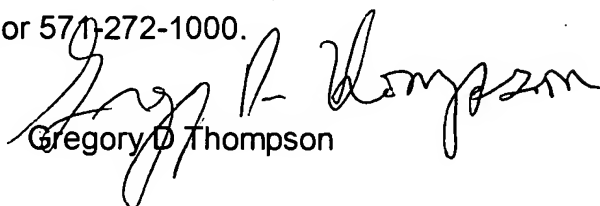

4. Claims 5-6 are allowed.

The cited art does not teach nor suggest the method for implanting a fin while packing an IC chip composed of positioning a chip in an encapsulant in a melted state an implanting a fin in the encapsulant at a position where a lower portion of the fin has an amount of the encapsulant located on top thereof and an upper portion of the fin extending outwardly above the encapsulant before the encapsulant is cured as claimed.
